

Multi-Action Germicide

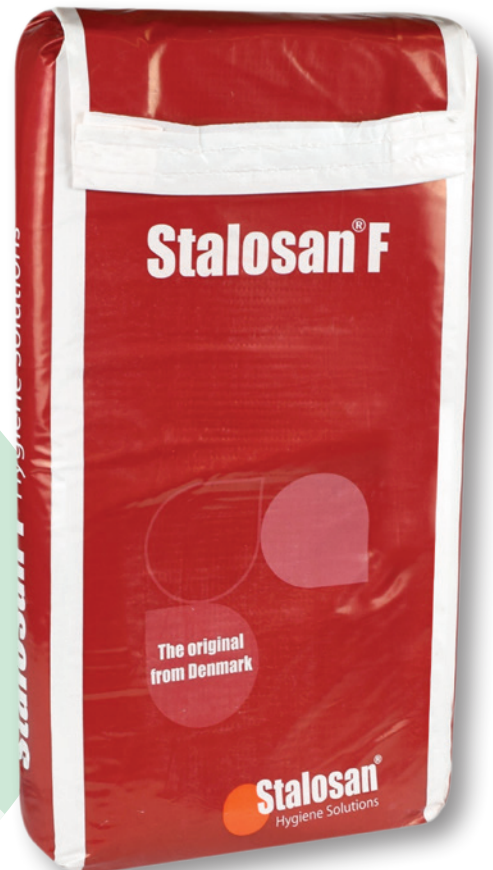

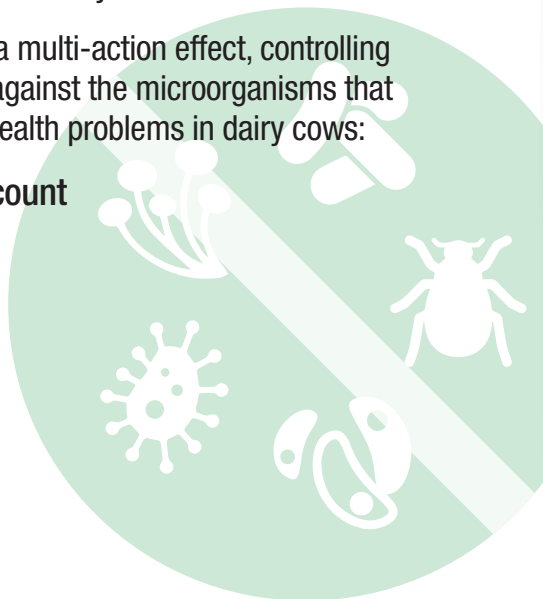

Multiple Benefits

Trust Stalosan® F to aid in the protection of your cows from bacteria and disease.

Stalosan® F assists in lowering mortality, reducing medication costs, and increases your profitability.

The germicidal powder has a multi-action effect, controlling the pH level and protecting against the microorganisms that cause some of the leading health problems in dairy cows:

- Mastitis and high cell count
- Scouring
- Hoof problems
- Joint infections

Benefits of Stalosan® F in Dairy and calf rearing operations

- Reduces bacterial, viral, and fungal infections
- Reduces parasitic infections and fly infestations
- Decreases the pathogenic load on the production system
- Reduces parasites, dermatitis, and coccidiosis
- Reduces veterinary costs
- Improves animal housing conditions

RECOMMENDED APPLICATION

Apply at the rate of 50gm/m² once a day for the first 3 days to condition the pen. As a maintenance and preventative measure Stalosan® F should then be **used once a week** at the rate of 50gm/m². Spread over the top of the litter.

In case of specific infection levels needing control, apply Stalosan® F at the rates above at least 3 times a week until the situation is under control.

Stalosan® F should be spread directly on existing litter or floors especially along the edges where wet and dampness occurs.

By using Stalosan® F in your dairy and calf shed sanitation program, you will:

 <p>REDUCE DISEASE</p>	 <p>REDUCE TREATMENT AND VETERINARY COSTS</p>	 <p>IMPROVE YOUR PRODUCTION ENVIRONMENT</p>
<p>Stalosan® F reduces incidence of dermatitis and coccidiosis</p>	<p>In addition to reducing infections and disease, Stalosan® F reduces parasitic infections and fly infestations</p>	<p>Stalosan® F keeps your barn environment drier, and therefore healthier, optimising cow performance</p>

Trusted by producers around the world for over 50 years

Stalosan® F The Powder with the Power to Protect

Stalosan® F helps you improve your dairy farm health standards

Its active ingredients are proven to kill pathogens and reduce ammonia to improve environmental conditions for cows, calves, and handlers alike.

Stalosan® F is particularly useful during the spring and Autumn "wet seasons" and is ideal for:

- Spreading in stalls
- Dressing calving areas
- Using in calf pens/hutches

Limestone Vs Stalosan® F

Limestone

- High p.H (9)
- Extremely hazardous to work with.
- Protective clothing must be worn.
- Can cause severe burning to eyes and mucous membranes.
- Can burn the footpads of animals.
- Cause cracking and dryness of hoofs.
- Has no affect on reducing ammonia in housing.
- Water and limestone combined create a slippery floor environment.
- Must remove animals from shed before use.

Stalosan® F

- Low natural p.H (below 4)
- Destroys and/or controls pathogens.
- Not caustic and safe to use.
- Use while animals are in the pen.
- Powerful drying agent.
- Significantly reduces odour in animal housings.
- Binds more than 70% ammonia once applied.
- Non slippery when wet.
- 7 days efficacy.
- Can be used to maintain hoof health.

Handyman spreads the contents directly to the side and there is therefore no problems with dust
